

APPENDIX:

The Appendix includes the following item(s):

☒ - a new or amended Abstract of the Disclosure

ABSTRACT OF THE DISCLOSURE

A configurable architecture of a calculation device includes at least one individual configurable and/or reconfigurable switching device, whereby the output variables thereof form a time point t_{n-1} and the input variables of the switching device form a time point t_n . Elements are provided in order to control the output variables in a clocked manner and to store the output variables of the switching device between the time points t_{n-1} and t_n .
